

ATTENTION: PLEASE READ

Date: March 12, 2026

Bulletin #: Bul-Prod-0326-071

Subject: **Unwelded Driveshaft Assemblies Length Changes**

To: **All Neapco Drivelines Aftermarket Group Customers**

Bulletin Clarification:

Not all the parts have transitioned from the previous part number to the new part number. For the parts which HAVE transitioned over (highlighted in yellow):

- You may order either part number using manual entry on the cart screen.
- You will receive 36" labeled as 31" until the 36" inventory has been depleted.
- All part numbers listed below have already received a price decrease in your price file, effective 3/9/26, for both 36" and 31".

The remaining part numbers will be transitioned as stock is depleted. You can check the Alert section of the Cart screen on NeapcoParts.com for updates. We apologize for any confusion.

Original Communication:

Please be aware that effective immediately, we have shortened the tubing length from 36" to 31" for several popular unwelded driveshaft kits. All previous part numbers within our systems have been superseded and any inventory in stock has been relabeled to the new numbers. ***During this period of transition, until current supplies of kits with 36" of tubing are exhausted it is possible that you might receive kits containing 36" tubing when ordering the new part number.***

(Continued)

ATTENTION: PLEASE READ

We are making this change based on customer feedback that told us tube lengths over 31 inches were consistently going to waste. These driveshaft kits, now in the new 31" tube lengths reduce waste in your customer's shop and allows for more cost-effective packaging. Also, we have given modest price reductions for these parts.

To learn more about Neapco brand products please visit www.NeapcoAftermarket.com. Please contact your respective Neapco sales representative for any additional questions you might have regarding this change.
